

SPAMINA CLOUD EMAIL ARCHIVING NOW ON MICROSOFT EXCHANGE AND POSTFIX

SPAMINA, a company that develops innovative Email Security solutions, has announced the inclusion of a new function in its Cloud Email Archiving application: the collection of daily account mails from Microsoft Exchange, and mail accounts from Postfix servers. These new utilities enable interaction with the mentioned servers in order to capture and file incoming, outgoing and internal mails of the organisation, and facilitate the filing of the internal mails in these servers.

They also improve users' experience by enabling mails with associated inline or application multimedia contents to be viewed. The mail viewing optimisation means that they can be presented more faithfully to the user than the original mail.

Spamina recently included the function of administrator mail access permits in Spamina Cloud Email Archiving. This tool, which comes into line with regulations concerning the protection of personal data, makes it possible to determine whether an administrator user can read the file mails, export them or forward them. It also includes a series of instruments to improve one's experience in using the application, such as displaying the mail headers and searching by sub filters applied to the results obtained by a previous search, which makes it easier to find information.

Other outstanding characteristics of Spamina Cloud Email Archiving are its accessible professional user interfaces which, along with a portable backend, enable: rapid configuration for use with any standard mail server; search facilities by multiple category, graphs and tools for the file administration; search and rapid recovery of any mail, checking the integrity of the messages stored in the file and multiuser support enabling more than one administrator to access the file.

Spamina Cloud Email Archiving provides storage and safe administration of e-mail and also provides immediate access to filed mails. This solution is included as part of a Security Suite which also covers Spamina Cloud Email Encryption & DLP, a tool to enable administrators to establish, check and personalise the privacy policies of their organisations, and which assures that confidential content is automatically encrypted.

About Spamina

Spamina is a company that develops and offers innovative E-mail Security solutions in Public Cloud, Hybrid and Private Cloud environments. Spamina's solutions are aimed at all kinds of companies and MSPs/ISPs, which they provide with Mail Firewall, Archiving, Encryption and DLP (Data Lost Prevention), in order to give systems administrators and users protection, management and total control over their electronic mail.

Spamina (Aegis Security) has offices in Barcelona, Madrid, Milan, Paris, Reading (UK), Buenos Aires, Sao Paulo, Mexico DF and San Francisco (USA). Its products and services are distributed through the main authorised partners.
