

CLOUD SECURITY PROVIDER SPAMINA SELECTS COMMTOUCH MESSAGING SECURITY

Sunnyvale, CA, and Barcelona, Spain – July 26, 2011 – Spamina, a leading Spanish cloud email security company, has selected messaging security solutions from Commtouch[®] (Nasdaq:CTCH) to enhance its Cloud Email Firewall offering, the two companies announced today. Spamina plans to integrate Commtouch technology in its next upgrade, scheduled for September 2011.

Spamina provides a range of cloud-based email security services for enterprises, service providers and managed service providers. The addition of Commtouch technology will improve Spamina's spam protection offering and complement its own filtering technology.

"After evaluating multiple alternatives, our technical team determined that Commtouch's messaging security suite provides the most significant overall improvement in spam filtering rates and reduction in false positives for our customers," said Ramon Planas, Spamina's executive vice president of global sales and marketing. "Our agreement with Commtouch enables us to deliver a strong, differentiated email security value proposition to the market, benefiting public, hybrid, and private cloud environments."

In addition to the major improvement in spam detection rates, Spamina noted a measureable reduction in spam entering the network. Utilizing Commtouch GlobalView™ Mail Reputation service, Spamina is able to reject a significant amount of suspicious emails before they ever enter its cloud-based network. Reducing email at the perimeter improves spam processing efficiency as well as spam detection. Fewer suspicious emails entering the network also translates directly into reduced operating expenses for Spamina customers by greatly simplifying management of spam quarantines.

Commtouch's unique messaging security suite offers the highest level of spam, malware and phishing protection for cloud-based security providers. The company's patented Recurrent Pattern Detection (RPD™) technology is able to detect unwanted emails in any language or format, providing spam protection for all geographical regions. RPD also helps reduce the window of vulnerability from new virus outbreaks by blocking malware attacks in the initial minutes, before traditional antivirus signatures are available. Commtouch's GlobalView technology adds an additional layer of protection by providing real-time classification of IP addresses, enabling it to identify and block emails originating from suspicious senders, such as compromised accounts and zombies.

"We are pleased to work with Spamina, a global cloud security provider and leader in the Spanish and Latin American markets," said Ofer Tal, vice president of international sales and business development at Commtouch. "Commtouch's real-time protection and accurate identification of spam, malware and phishing email messages, regardless of their language, content, or origin, will benefit Spamina's customers and help Spamina increase its leadership role as it expands its presence in Europe, the Middle East and Africa."

About Spamina

Spamina is a company that develops and delivers innovative Cloud E-mail security solutions in public cloud, hybrid and private cloud environments. Spamina's solutions are designed for all types of businesses and MSPs/ISPs with solutions for Email Firewall, Archiving, Encryption and DLP (Data Lost Prevention) aimed at ensuring that system administrators and users have secure protection, management, and total control of their email.
